French

English

PROFILE

I am Jean Desauw, a 30 yo Fullstack Javascript developer specialized in React and React Native with nearly 3 years of experience. Through my freelance journey, I've crafted innovative web and mobile applications, transforming visions into technological solutions. My approach is deeply rooted in problem-solving, combined with full autonomy and an ability to work effectively within a team. My relentless passion for continuous learning ensures I remain at the forefront of current technologies and methodologies.

WORK EXPERIENCE

Freelance Web and Mobile Developer

July 2022 - Present

MLD Atelier   January 2022 - April 2022

- Developed an e-commerce website for an independent jewelry designer using Next 12, MongoDB, Material UI, and Stripe. Currently working on a comprehensive revamp of the website. The admin client and backend are complete, while the store client is still in progress. The new website is being developed using Next 13, Typescript, Prisma, MySQL, Tailwind and Stripe.
- Today, MLD Atelier acts as stable secondary income source for its owner.

Pennypet   November 2022 - December 2022

- Took full responsibility for the mobile application's frontend development. This was my first mobile application where I was solely responsible for the frontend. Implemented a nested navigation using React Navigation, created a custom Modal component with an integrated navigation, and extensively used React hooks. Additionally, utilized Tailwind with the Nativewind npm package to ensure compatibility with React Native
- Today, the app is available on mobile stores, and as far as I know, it reached over 300 subscribers in the first month.

Orydar   March 2023 - August 2023

- Designed a mobile app inspired by Airbnb but focused on gastronomy. Developed the application using React Native and created an API using Node.js to synchronize it with their existing WordPress website's database. Created the REST API for multiple types of data: users, hosts, menus, bookings, orders. Implemented Stripe payments and replicated the functionalities of some WordPress plugin in Node.js. Implemented a JWT system for user authentication and developed functions to optimize and store images in multiple formats to meet WordPress constraints.
